

Dylan Pagillo

SENIOR DESIGN ENGINEER

Designer and engineer shipping production interfaces end-to-end.

dylanworkingonthings@gmail.com · 516.512.9465 · linkedin.com/in/dylanpagillo

EXPERIENCE

Senior Design Engineer · Journey Up

11/25 – Present

- Founding-team member at an early-stage startup, working across design, front-end engineering, and product strategy.
- Ship production React features end-to-end, from Figma to deployed code, using AI tooling (Claude Code, Cursor) to compress design-to-ship cycles.
- Contribute to product direction and engineering decisions as part of a small, fast-moving team.

Software Engineer and UX Designer · Cisco

02/21 – Present

- Lead designer on two of Cisco's internal cloud-management platforms — **RunOn Managed Service** (mature, broadly deployed) and **Control Plane Platform** (newer, fast-growing).
- Together the platforms manage tens of thousands of cloud resources, handle tens of thousands of quarterly requests, and serve thousands of engineers across hundreds of business applications.
- Drive design from research and Figma prototyping into React implementation — components, flows, and patterns shipped to production.
- Guide two designers and partner closely with PMs and engineers across the US, India, and China in an Agile environment.
- Ship full-stack features in React/Angular (front end) and Go/Python (back end), bridging design and engineering on a single team.
- Accelerate design-to-ship workflows with AI tools (Claude Code, GitHub Copilot, Figma Make), integrating Figma → front end → back end into one continuous process.

Front-End Developer · CData Software

04/19 – 02/21

- Designed and built much of CData's marketing website — a B2B site showcasing 100+ data-connectivity products with searchable, filterable browsing and interactive JavaScript components.
- Designed UI for multiple enterprise data-connectivity platform applications in partnership with the product team.
- Implemented front-end across HTML5, CSS3, JavaScript, Bootstrap, SASS, and jQuery.

Front-End Developer (Volunteer) · Tech for Campaigns

08/20 – Present

- Volunteer front-end developer for political campaign websites since 2020, contributing to multiple sites built to convert visitors into supporters and donors.

EDUCATION

Master of Science, Information Design & Technology — SUNY Polytechnic Institute (2019)

Bachelor of Science, Information Technology — SUNY Empire State College (2016)

SKILLS

Design: Figma, Interaction Design, Design Systems, Prototyping, Research

Engineering: React, JavaScript, Angular, CSS/SCSS, Go, Python, Django

AI Tooling: Claude Code, Cursor, GitHub Copilot, Figma Make, ChatGPT

Methods: Agile, Design-to-code workflows, Cross-functional collaboration
